

Function of Optical Cable Stranding

Overview

These cables consist of uncoated strands reinforced with metal or fiber-reinforced polymer, merging with shielding casings. This produces a durable and efficient solution for fast digital connectivity. The system is compatible with various substances, such as PVC, LSZH, and PE. Rosendahl Nextrom is a global leader in battery, cable & wire and optical fiber production technologies whose goal is to connect your needs with our technology. FTTH technology, an initialism for Fiber To The Home, marks a state-of-the-art network architecture. It utilizes Sheathing line to provide high-speed internet and strong communication services straight to homes. From power cables to data transmission lines, the way a conductor is stranded determines how efficiently it carries current, how resistant it is to stress, and how long. Through MES/ERP connectivity, these Fiber coloring machine assembly lines offer peerless accuracy and productivity.
