

ARM Server AI

ARM Server AI

The Arm AGI CPU is the first production silicon from Arm, designed for AI infrastructure at scale. We believe it delivers a new class of CPU with high performance and extreme rack-level density support ...

By early 2029, Arm architectures are projected to dominate the AI ASIC server CPU market, propelled by two powerful catalysts - aggressive scaling of Arm architecture licensing for ...

AI CPU expansion: Arm's AGI CPU program spans cloud, edge, and physical AI, with multi-year demand commitments exceeding \$2 billion. Market share gains: Server CPU share is forecast ...

SK Telecom (SKT) has joined forces with chip design company Arm and Rebellions, an AI accelerator startup, to create AI inference server solutions for next-generation data centers.

There is no way in hell that Arm can compare its AGI CPU to the homegrown Arm server CPUs that its hyperscaler and cloud builder companies have brought into existence over the past ...

Over the next several years proliferation of custom CPUs based on the Arm ISA inside AI servers will increase to 90%, leaving x86 and Arm around 10%, according to Counterpoint Research.

By combining the Arm AGI CPU with Rebellions' NPUs in new high-density server configurations — we're delivering a scalable, energy efficient platform that is optimized for AI inference workloads at ...

Arm enters the chip business with its AGI CPU for AI data centers, claiming 2x performance versus x86. The historic pivot reshapes competitive dynamics across the industry.

Meta co-developed the AGI CPU, the first Arm-designed data center chip, built to meet surging demand for scalable AI data center processors.

Regardless of the hot AI topics du jour and a seemingly negative environment, Arm has picked a propitious time to enter the server-processor market. Compatible deployments are well ...
