

Aggregation Switch Setup Steps

Overview

Step 1 Ensure switches are AOS-CX 10. Multi-Chassis Link Aggregation Group (MC-LAG) enables redundancy and load balancing by connecting two ECS-Aggregation switches as an MC-LAG pair. This setup ensures minimal downtime and increased throughput by aggregating multiple links. When configuring MC-LAG, it is important to properly. This manual provides detailed instructions for the installation, operation, and maintenance of the Ubiquiti Networks UniFi Aggregation Switch, model USW-Aggregation. This managed Layer 2 switch is designed to enhance network performance with its eight 10G SFP+ ports, offering high-bandwidth. This guide covers what port aggregation / link aggregation (LAG) is and how to enable and use it within UniFi. Aggregating ports on a UniFi switch allows you to combine multiple physical network connections into a single logical link, increasing bandwidth and providing redundancy.
