

## Air bubbles in the fiber optic cable connector

### Overview

There are bubbles or cracks in the joints during welding. This situation may be due to poor cutting of the optical fiber, such as inclined end faces, burrs, or unclean end faces. Perhaps one of the most maddening things about a mixed material is entrained bubbles. You want to stab them, push them and blow on them. It is necessary to clean the optical fibers before performing fusion splicing operations; another case is that the. Dirty connectors are one of the major problems in fiber optics, causing high connector loss, high reflectance and contaminating transceivers. Network operators claim that 15-50% of all network problems can be traced to dirty connectors causing connection problems. One of the first visits we made to. Optical fibers can be joined together, such that light is efficiently transferred from one fiber to another.
