

Can fiber optic cables be run through power conduits

Overview

General Consideration: It is generally not recommended to run fiber optic cables in the same conduit as electrical power cables. This is due to several potential risks and complications that can arise from such an arrangement.

Electrical Interference: Electrical cables can produce electromagnetic. Fiber optic cable transmits data as light pulses through thin strands of glass or plastic, offering high speed and bandwidth. Another benefit of using the fiber optic cable. We now need to put a data switch at the generator yard but don't have any other raceway going to the generator yard except the 2" conduit for the Generator Annunciator. :-?
