

Connect the electrical distribution box in the corridor to the surveillance camera

Overview

In this video we will demonstrate how to connect a security camera to a surveillance DVR using BNC plug and play CCTV cables and a power distribution box. The following equipment is used in this video. We recommend using a power box in a camera system because it allows for stable power distribution. A power box enables a cleaner installation versus using individual 12V power supplies for each camera. In this guide, you'll learn how to install it step by step, choose the right type, avoid common problems, and keep your system running safely. The process is almost exactly the same if you. Our electrical box mounts are used to give easy access to your connections, hide them inside the junction box, and allow you to drill a smaller hole in your wall. If you want to run conduit they are necessary to run conduit straight to the camera.
