

Connecting fiber optic switches to other switches

Overview

Can two switches with fiber ports be directly connected through fiber ports?

The answer is yes. Moreover, when it comes to bandwidth, no currently available technology is better than single-mode fiber. It can provide significantly higher bandwidth and carry more data. Other than entry level network switches, most of today's network switches include one or more GiBC (Gigabit Converter) or SFP (Small Form-factor Pluggable) slots. Fiber provides: Increased internet signal bandwidth. Most modern fiber-enabled network switches require an SFP transceiver module. I need to connect a single 3750G - 48 ports switch to a single 2960 - 48 ports switch and it needs to be through a fiber. Each node is connected to two other nodes, forming a ring-like structure. This design ensures data can travel in both directions. If one. I am planning to connect core switch to multiple switches using 6 strand fiber cable. which type of cnnnection is resilient Star or Ring?

?

If I make star then do i have to use new cable to each switch or strand of a cable to patch other switch?

?

Thanks. It usually depends on the model of the switches.
