

## Did the circuit breaker trip when it went up from the distribution box

### Overview

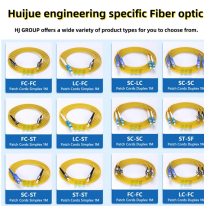

When a breaker detects an abnormal surge, it “trips,” cutting off electricity to prevent potential damage. You can reset the breaker once the issue is resolved. It's working exactly as designed. It's shutting off power because something on that circuit isn't safe. The tripping is a warning signal, not a malfunction. But what's causing it?

And more importantly, does it need an expensive fix, or is. The main circuit breaker is designed to protect the electrical system in a building or home from overload and potential fire hazards. This occurs when a hot wire touches a neutral wire or another hot wire. In this guide, we'll walk through these.

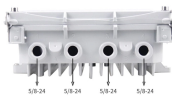

## Did the circuit breaker trip when it went up from the distribution board

Uncover the top reasons why your circuit breaker keeps tripping. Learn how to troubleshoot, fix and prevent it.

In this article, we'll explain why circuit breaker trips happen, how to find the problem, and what you can do about it. We'll also help you understand ...
