

## Does the patch panel need to have an optical module

### Overview

With the exception of intelligent or smart patch panels, that require a power-supply and may have LED indicators for each port, a typical patch panel is passive and therefore does not provide conversion of signals and requires connected devices to have medium specific (e. HBA for Fiber Optic and. A fiber patch panel, also called an optical fiber wiring rack, an optical fiber distribution rack, or an optical fiber terminal box, is a device with multiple ports for connecting and arranging. And managing optical fiber cables at the center. Whether in data centers, telecom central offices, or enterprise network rooms, ODFs enable efficient fiber management.
