

Electric distribution boxes on the streets of Spain

Overview

Open map of the world's electricity, telecoms, oil, and gas infrastructure, using data from OpenStreetMap. It connects the electric power generation centres with distribution. Connecting the transmission grids and production centers to consumption points. e-distribución supplies electricity in 24 Spanish provinces in 8 Autonomous Communities (Andalusia, Aragon, Balearic Islands, Canary Islands, Catalonia, Extremadura, Castile and Leon and Galicia) and the Autonomous City. In financial year 2025, which was marked by a high degree of uncertainty in the global political landscape, international trade, and economic policies, investment in the transmission grid increased to €1.9% rise compared to the previous year. These facilities act as connection points to transfer electrical power from generating plants to end consumers.

Electric distribution boxes on the streets of Spain

Discover what electrical substations are, how they work and our drive to innovate to improve energy distribution.

In Spain, electricity is transported at voltages that can exceed 400 kV for long distances, and its control is carried out by remote management centres, which allows efficient detection and resolution of any ...

The transmission grid comprises a set of facilities that forms a connected system so that electricity is accessible to the entire community safely and reliably.

In this article, we'll explain this in depth, breaking down the path of electrical energy, key infrastructure, the differences between transmission and distribution, and the measures that guarantee the security ...

These are used for the transmission of energy from electrical substations to the transformer substations of the core consumption areas. They can be mounted on steel lattice towers, wood or concrete ...

This project, with a total length of 137.8 km, will significantly improve the security and quality of Ceuta's electricity system, reduce its generation needs and overall costs, and enable greater integration of ...

The new strategy allocates up to €7.7 billion (\$9 billion) more for electricity distribution grid spending and an additional €3.6 billion for the transmission network. The latter infrastructure ...

Consumers of electricity have the right to obtain access and be connected to electricity transmission and distribution networks in Spain.
