

Fiber optic cable pole guy wire added to

Fiber optic cable pole guy wire added to

Field Identification: Fire Department cables can be easily recognized, as it is usually two small cables that travel parallel to each other, about 4" apart, from pole to pole (Figure 3-12).

Installation Of Messenger Wire: Installation of messenger wires requires choosing the correct gage wire and installing the wire in the telecom space on the pole with proper hardware before lashing the fiber ...

Anchor & Guys: A tensioned cable and accompanying assemblies designed to add stability to pole structures.

Fiber optic cable sequential numbers are required at each pole location and vault wall. Sequential numbers will identify conduit length, and slack left in vaults and at poles.

This document provides technical specifications for the aerial installation of fiber optic cable (FOC) networks. It outlines PLDT standards for pole line hardware, ...

Communication lines attachments on metal poles may only be attached to unpainted metal distribution poles and shall be clamped or banded to the poles with stainless steel straps.

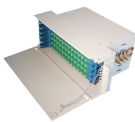

3.1 Guys for poles supporting lashed filled copper or fiber optic cables at various corner angles and deadends for the three commonly used suspension strands installed either singly or in combinations ...

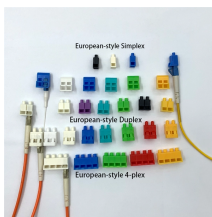

Anchor - A device supporting and holding in place conductors terminated at a pole, or a structure buried and attached to the pole by way of a Guy Wire, to counteract the mechanical forces of the ...

It is possible to add fiber later to an existing span. It is recommended to check back with whomever issued the detailed installation instructions as to whether this will work for the given span.

y. Guying requirements can often be advantageously combined on a deadend pole, a span or more away by extending the circuit or by use of span guys in order to provide a reduced combined guying ...

Guy wires may be attached to PPL poles or anchor rods provided that the PPL facility has sufficient unused strength to support the proposed communication cable facility.

Deploying fiber above ground on poles or towers removes the need for underground digging and is particularly useful when the ground is uneven, rocky or both. Aerial installation is generally much less ...
