

Height of the bottom of a household electrical distribution box

Overview

Most electricians measure to either the bottom or the center of the box. To Center of Box: 16 to 18 inches from the finished floor. Are these the proper heights for electrical boxes?

Unless there is an ADA rule involved you can pretty much use whatever heights you want, with some exceptions. NEC Article 408 covers switchboards, switchgear, and Panelboards installation and applications. For a typical residential installation, the standard electrical outlet height is 12 to 16. The electrical service panel, often called the breaker box, is the central distribution point for all electricity entering a home or building. Its installation height is strictly regulated to ensure safety and accessibility for proper operation, maintenance, and emergency response.
