

Home LC interface

Overview

The LC (Lucent Connector) is the dominant interface for modern networking. 25 mm ferrule, which is half the size of the older SC connector. High Density: Because of its small footprint, manufacturers can fit 48 or even 96 LC ports on a single 1U switch. Beyond space efficiency, LC connectors also deliver excellent optical performance with insertion losses of just. If you are upgrading a network switch or deploying fiber to the home (FTTH), you will inevitably face the connector choice: LC vs SC. Choosing the wrong one can lead to costly restocking fees or project delays. But if you've arrived here wondering whether it's worth replacing a damaged LC connector or building your own fiber patch cable, it's time for a pragmatic reality check. 25 mm ceramic. Most SFP fiber optic modules use LC connectors, while SC connectors are mainly found in legacy networks and MPO/MTP connectors are used for high-density cabling rather than directly on standard SFP modules.
