

How high should a household electrical distribution box be

Overview

The proper installation of a distribution box involves placing it at the right height to ensure safety and convenience. This height also safeguards the box from potential. The electrical panel, often referred to as the breaker box or service panel, serves as the main distribution hub for all electrical power within a home or building. They are exposed type and concealed type. Ground-mounted foundations should be 50 to 100 mm above ground level.
