

How to install a single-mode dual-fiber optical module

Overview

This installation note provides the installation instructions for the Cisco small form-factor pluggable (SFP) and SFP+ transceiver modules. Should you use a single strand (BiDi) or two strands?

Do converters need to be used in pairs?

Can you mix brands?

What wavelengths matter?

This guide answers it all with clear diagrams, step-by-step checklists, and field-tested troubleshooting tips. A fiber media converter takes an Ethernet signal. A BiDi SFP module is a bidirectional fiber optic transceiver that enables simultaneous transmit and receive over a single strand of single-mode fiber, instead of the traditional two-fiber setup. In practical network deployments, this makes BiDi SFP modules a highly effective solution for. This document is intended to serve as a guide for architecting and deploying fiber optic

networks in a customer environment. That is because SMF and MMF have.
