

How to match a single-mode dual-core optical module

Overview

Not sure whether your SFP module is single-mode or multimode?

Using the wrong one can seriously impact network performance. Multi-mode modules are good for short distances. Think about distance, speed, fiber you have. The secret lies in fiber optic technology, and understanding the basics—1-core, 2-core, Single Mode (SM), and Multi-mode (MM)—is key to mastering this field. Let's break down these terms in simple, clear language with practical examples. 2-core or In optical modules, "core". SFP (Small Form-factor Pluggable) is a compact, hot-pluggable network interface module used to connect network devices (switches, routers, firewalls) to fiber optic or copper cables. Think of it as the “translator” for your network equipment, converting electrical signals into optical signals. As a professional optical module manufacturer, Svelol provides this comprehensive guide to help you master the essentials of optical module and patch cord matching for reliable, high-performance networks. Interface Type Common patch cord interfaces include LC, SC, FC, ST, and MPO/MTP.
