

How to set up an active optical splitter

Overview

Power Up: Connect the included 5V DC adapter to the splitter and plug it into an AC outlet. **Connect the Optical Source:** Using an optical (TOSLINK) cable, connect your source device's Optical Out to the splitter's SPDIF Input. This active splitter regenerates and amplifies the audio signal, ensuring no loss in quality over longer cable runs. Understanding how to properly place and use an optical splitter is essential for optimizing signal quality and ensuring seamless data transmission. Let's explore the best practices for deploying this crucial component. This is ideal for sending audio from one source (Blu-ray player, game console, TV, streamer, etc). This board includes an SPI flash for storing firmware, an UART connector for debugging and In-System Programming purposes (firmware download), two S/PDIF outputs, four I2C master the RD1-4320 board used for connecting a PC to two.
