

Hydraulic bridge frame stamping

Overview

Our hydraulic stamping presses typically utilize a gib-guided (or four-post) frame. This structure ensures precise linear motion during operation, allowing the machine to maintain higher speeds, stability, and accuracy during stamping. We are thrilled to share that AMADA PRESS SYSTEM AMERICA is officially integrating with AMADA AMERICA! This move allows us to provide a more streamlined experience for our partners and customers, offering a complete selection of our stamping and manufacturing solutions. Applications include forming, stamping, blanking, bending, piercing, punching, perforating, trimming, transfer, flanging, joggling, forcing, and others. Our. These are the major components and features of the hydraulic press structure: 1. Four-column structure hydraulic press with. Two hand anti-tie down buttons with infrared sensing beams are ergonomically designed to eliminate physical pressure.
