First, the most critical difference is the fiber connector.Fiber optic pigtails have only one terminated connector on one side but bare fibers on another side. In contrast, the patch cords have two or more pre-terminated. There are many types of fiber pigtails based on one different factor. Fiber connector types include LC pigtails, SC pigtails, ST pigtails, FC pigtails, MU pigtails, and E2000 pigtails. By fiber types, including single mode and mulitmode pigtails. Next, Let us have a closer look at the fiber pigtails types.Mechanical SplicingMechanical Splicing is a simple alignment device that allows light to enter from one fiber to the other by holding the ends of the two fibers in

precise alignment. This method has been around for many years. It continues to be popular because it provides immediate, straightforward termination with a limited waste of results as it requires fewer consumables than traditional epoxy/polished connector methods. Mechanical fusion splicing has a lower initial investment but a higher cost per splice.Fusion SplicingFiber fusion splicing is a technique that uses high temperatures generated by th.
