

Installation Solution for NEMA4X Earthquake-Resistant Server Racks in South Korea

Installation Solution for NEMA4X Earthquake-Resistant Server Rack

With just under a four-minute run time, the video explores the various seismic considerations for rack designs. A series of geographic and site-specific factors informs the design, ...

From cutouts and coatings to unique configurations, our engineers work alongside you to deliver solutions for the most demanding applications. Every enclosure ships packaged to protect finish and ...

Seismic server racks are engineered for environments requiring vibration and earthquake protection. Designed to support secure equipment deployment in regulated and high-risk areas.

A rack solution was created that perfectly met the customer's challenging thermal, acoustic and seismic specifications, fully tested and independently certified.

We offer IBC kits designed to anchor our 10 Series® and GUARDIAN™ frames, meeting life safety requirements for protecting building occupants from falling objects in the event of an earthquake as ...

For Optical Distribution Frame installations, DCX Seismic Cabinets are fully configurable, front-access cabinets that serve as a high-density fiber interconnect or the main building block for a large fiber ...

Based on the standard, patented frame design of the RS, RSP and FRS server rack series, this NEBS compliant configuration has been tested and certified to meet Telcordia (Bellcore) ...

Includes two (2) pairs of EIA compliant 19in square hole mounting rails with rack unit markings. Note that the DCZ4 is NOT compatible with 23" mounting rails. Mounting rails are constructed in 12-gauge mild ...

It is designed for secure, high density server and networking applications in IT environments that are earthquake prone or subject to regular vibration, such as an airport or factory.
