

Installation of fire-resistant cable trays in Egypt

Overview

This document outlines the key requirements for cable tray layout, installation, and fireproofing in industrial and commercial environments. Cable trays are used as an alternative to open wiring or electrical conduit systems, and are commonly used for cable management in commercial and industrial cabling systems. Whether in industrial facilities, commercial buildings, or infrastructure projects, cable trays ensure that cables are supported, protected, and easy to manage.

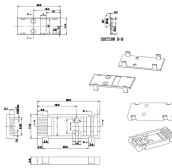

1-. Electrical cable tray wall penetration firestopping Scope: Firestopping for busway, cable trays, cables, and trunking passing through walls in enclosed electrical installations. When fire resistance is required, the “best” solution is rarely universal. Load capacity varies by tray type, material, and dimensions, ensuring suitability for both.

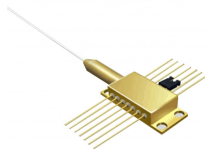

Installation of fire-resistant cable trays in Egypt

After the steel cable tray has been manufactured and assembled, the entire tray is immersed in a bath of molten zinc, resulting in a coating of all surfaces, as well as all edges, holes and welds.
