

## Is only one type of inspection report required for cable trays

### Overview

Cable trays in hazardous locations must contain only the cable types and raceways permitted by the Code for the application [392]. For permitted cable types, see 501. In addition, this document contains several references to provisions of the National Electric Code. This standard specifies the requirements for nonmetallic cable trays and associated fittings designed for use in accordance with the rules of the Canadian Electrical Code (CEC) Part 1, and the National Electrical Code® (NEC). The content is written to be SEO-friendly and compatible with Yoast SEO for WordPress. Here is the summary of the main points found in NEC Article. The primary rulebook used in the safe use of cable trays is NEC Article 392. You should consider it as a series of instructions that make the buildings resistant to.

## Is only one type of inspection report required for cable trays
