An 8-core multimode fibre optic cable is a high-capacity data transmission solution widely used in enterprise networks, data centers, and telecommunications infrastructure. Currently the most common densities include 12 fiber and 24 fiber connectors. The 8 fiber MPO cable is able to establish up to 8 individual fibers for information. These multifiber assemblies deliver unprecedented density, routing up to 144 fibers in a single cable jacket, dramatically reducing cable tray congestion and improving airflow. Choose Connectors, Jacket Type, and Optional Pulling Eye.
