

Network server racks will rust if left in the rain

Overview

Prolonged exposure to rain allows water to easily seep in, causing internal rust and mold, damaging the rack before installation and rendering it ineffective. Server racks house some of the most critical hardware in your business, from high-value servers to networking devices. A single water-related incident can lead to equipment failures, data loss, and costly downtime. As a rule, they accommodate massive servers and supplementary accessories. The following types of furniture are provided on the modern market: open-frame furniture, rack enclosures, and. AZE's 19" outdoor server racks and outdoor network cabinets are ideal for protecting sensitive network systems from any damage due to impacts and harsh climatic conditions. " Their protection capabilities have specific level limitations. It is important to understand the challenges metal faces when it is outside, as well as the pivotal role of corrosion protection the cold galvanization plays.

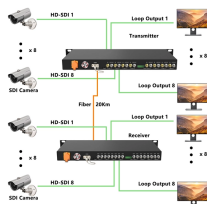

Network server racks will rust if left in the rain
