Overview

The product provides a pluggable GPON ONU interface for networking equipment with an uplink SFP receptacle enabling these devices to be deployed in GPON networks for FTTx, business services, and wireless backhaul applications. OTN is the ideal technology to bridge the gap between next generation IP and legacy Time Division Multiplexing (TDM) networks by acting as a converged transport layer for newer packet-based and existing TDM services. 709 and allows network operators to converge networks. As networks evolve to meet growing bandwidth demands, SFP transceivers remain a cornerstone for flexible, scalable, and cost-effective connectivity. In optical transport networks, especially Optical Transport Networks (OTN) and Synchronous Digital Hierarchy (SONET), choosing the right Small Form-factor Pluggable (SFP) is critical. For information about which MPCs support this MIC, see MIC/MPC Compatibility. This feature-rich device with highly customizable and powerful RutOS is perfect where a fast and ultra-reliable.
