

No sound from the distribution box but no circuit breaker tripping

Overview

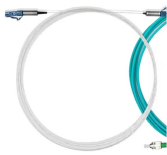

It can occur due to overloaded circuits, short circuits, or ground faults.
Solution: Identify the Cause: Check if the breaker is tripping due to overloading. This often happens when too many devices are plugged into one circuit. Reducing the load on the circuit or redistributing. That familiar sound of your circuit breaker clicking off - we've all been there. You will want a voltage tester (doesn't need to be a voltmeter) for this job. These problems typically arise from internal electrical faults such as loose connections, faulty wiring, or a tripped GFCI outlet. A thorough inspection is needed to.

No sound from the distribution box but no circuit breaker tripping
