

Relay Protector xj3-d

Relay Protector xj3-d

Note: In the example diagram of the application circuit, the protective relay can only provide protection when the phase failure occurs in terminal 1, 2, 3 and among the three phases of power supply A, B ...

What is the function of the XJ3 Protection Relay? It protects three-phase systems from phase loss, incorrect phase sequence, overvoltage, undervoltage, and voltage imbalance, ensuring stable and ...

XJ3-D phase failure and phase sequence protection relay is used to provide overvoltage, undervoltage and phase failure protection in three-phase AC circuits and phase sequence protection in irreversible ...

The XJ3-D Phase Voltage Sequence Loss Protection Relay is an essential device designed to your electrical systems from phase loss and sequence issues. With high-precision voltage monitoring ...

XJ3 series relays are used in the three-phase AC motor control circuits for phase loss protection and in the irreversible transmission equipment for phase sequence protection.

XJ3-D protection relay. If you are looking for this protection relay, can check.

As a mature multi-function three-phase power protection device, the XJ3-D effectively prevents motor burnout caused by phase failure, reversal, overvoltage, and undervoltage.

Product Description Relays XJ3-D XJ3-G AC380V Phase Failure and Phase Sequence Protection Relay

XJ3-D phase failure and phase protective relay (hereinafter referred to as relay) is applicable to control circuits with frequency of AC 50Hz/60Hz and rated control power supply voltage up to AC380V, for ...

The manufacturer recommends that the protector be installed perpendicular to the ground for easy control operation. Any other installation Angle will not have any effect on normal use.
