

Single-mode fiber coating materials

Overview

Single-mode fibers with a carbon, acrylate, or polyimide coating that can withstand the highest stress and temperatures of up to 300°C. Details on the physical and optical properties of these fibers are provided in Tables G1. Patch cables that incorporate these fibers are available from stock, see. Maintain beam quality, and minimize attenuation and dispersion, using single mode fibers available from the visible through the infrared. Coherent manufactures high-performance, single-mode fibers with a wide range of cutoff wavelengths, operating wavelengths, and coating options.

Single-mode fiber coating materials

This Polyimide-Coated Single Mode Fiber has a thin polyimide coating that allows it to operate safely in temperatures up to 250 °C. It delivers high performance across a broad spectral range in the telecom ...

We theoretically and experimentally compare the optical and mechanical properties of reduced coating diameter Single-Mode Fibers (SMFs) with either dual-coating or single-coating ...

Corning's Hermetic Single-mode and Multimode Fibers are designed for applications requiring improved fatigue resistance, high useable strength and excellent resistance to hydrogen permeation into ...

Select from a range of fiber configurations and options, including single and double clad, polarization maintaining, and radiation resistant, plus various coatings.

This paper covers the various types of optical fibers, their dimensions, methods of manufacture and the types of coatings used to protect them. The applications and capabilities of the various types of fibers ...

The 1310BHP, SM1250G80, 1550BHP, and SM1500G80 fibers have dual-acrylate coatings, while the SM1550P fiber has a polyimide coating for high-temperature performance in the telecom region.

The high germania content fibers have considerably enhanced photosensitivity, making them ideal for the fabrication of fiber Bragg gratings (FBGs). A range of harsh environment coatings are available, ...

Verrillon VHT500 is a pure silica core single-mode design with a protective metal coating that allows it to operate at temperatures up to 500°C. Typically, these fibers are used in down-hole data logging for ...

The polymeric coatings also facilitate fiber operation such as splicing of optical fibers since it is convenient to remove the coatings using a fiber stripper.

Single-mode fibers with a carbon, acrylate, or polyimide coating that can withstand the highest stress and temperatures of up to 300°C. Thanks to their robust coatings, high-temperature single-mode ...
