

The aggregation switch needs to be configured

Overview

On the core switch, configure a management subnet for aggregation and access switches, enable the DHCP server function on the gateway interface of the subnet, and enable the controller address auto-negotiation function. In this way, when configuring aggregation and access switches to be managed by the controller, you can configure the core switch as the management subnet gateway of the aggregation and access switches, and configure the management VLAN auto-negotiation function with the core switch acting as the. This managed Layer 2 switch is designed to enhance network performance with its eight 10G SFP+ ports, offering high-bandwidth connectivity for demanding network environments. Please read this manual thoroughly before using the device to ensure proper setup and functionality. Package Contents. Switch aggregation is transforming how networks handle data traffic. In the TAP aggregation switch solution, a Cisco Nexus 9000 Series switch is connected to various points in the network at which packet monitoring is.
