

The distribution box makes a frequent noise

Overview

The most frequent source of a problematic buzzing sound is a loose terminal connection within the panel. When the screw or lug that secures a wire to a breaker or bus bar is not properly tightened, the electrical current must arc across a minute air gap. This could be due to natural wear and tear, poor installation, or animals chewing on exposed wiring. An overloaded circuit can. A faint hum you can only hear right up against the panel is often just electrical current flowing through wires. But signs you should take seriously: When those occur, you should act.

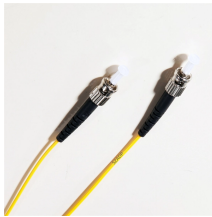

The distribution box makes a frequent noise

Distribution boxes are the unsung heroes of our electrical systems, quietly managing power until something goes wrong. When they start tripping, overheating, or making strange noises, it's more ...
