

The image below shows the end face of a fiber optic cable

PC end faces were polished into a subtle convex shape, improving fiber core contact and significantly reducing reflections. It was the primary end-face type for SC, FC, and ST connectors at ...

The connector in the middle shows contamination from some liquid, but the rings around the fiber show the epoxy on the fiber end was not completely polished off.

Fiber microscopes illuminate the properly fixed endface (often with an LED) and show a magnified image through an eyepiece. They are simple and can reveal very fine detail, but results are operator ...

A Fiber End-Face Microscope is a handheld or benchtop inspection device used to visually examine the tip—or “end face”—of a fiber optic connector. These microscopes magnify the ...

The latest IEC 61300-3-35 update includes simplified criteria for fiber end face inspection that can save time and reduce unnecessary component replacements.
