

The optical module needs to be restarted after a power outage

Overview

If possible, remove and reinstall the optical modules to check whether the fault is rectified. I have a problem with the SFP module on my C3750 Switch. There is a File Server connected to one of the ports on the module (there are 3 Gi ports) and whenever there is a power outage the module stops working and there is no access to the File Server, i thought the port that the SFP module was. The solution is to unplug the fiber and reinsert it into the SFP module interface until a “click” sound is heard, indicating the fiber connector and SFP module are properly connected. Contamination or damage on the fiber end face requires the use of a fiber end-face inspection tool. If not, run the display version command to check the software.
