

What are the types of secondary relay protection

Overview

Some common secondary protection relay types are as follows: Overcurrent Relay: Detects and intervenes in overcurrent situations in the system. Grounding Relay: Activates in times of ground leakage. ABB's Relion family of protection and control relays for secondary distribution offers a wide range of products for protection, control, measurement and supervision of power distribution systems for IEC and ANSI applications - from generation and interconnected grids in secondary distribution. This. Combines protection, sensors, control power, and circuit breaker in a single package Typically added to a breaker close circuit to prevent accidental reclosure after a trip. Three fundamental components required for each circuit breaker. Common in switchgear and automation, they enhance fault detection, interlocking, and the reliability of electrical protection schemes.

In overcurrent, the four most used common types of protection relays are 50, 50N, 51, and 51N. In this post, we will understand these types of protection relays.

Backup protection relays provide secondary protection in case primary protection relays fail to operate or if there's a delay in their operation. They help ensure the reliability and safety of power systems.

Protection mechanisms in electrical systems are generally divided into two main categories:
Primary Protection: It is the first protection line that detects the fault and quickly disables it.
