

# What to do if the distribution box cannot be configured

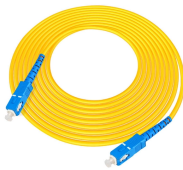

## Overview

Check the electrical load and ensure that the sensors do not exceed the 10 Amp maximum. I know that's not ideal, but this is really only an initial test, and doesn't need to house that many packages, if any at all. The drive has enough space to. PXE best practices and PXE-specific settings: use caution with unknown computer support —ensure task sequences match your environment to avoid unintended deployments. Set a Preferred Management Point hint for PXE requests, choose an engineer-friendly PXE password, pick the correct NIC selection. Use distribution points to host the content that you deploy to devices and users. Check for proper IP/NEMA ratings and material quality. Ensure safe placement: install in dry, accessible areas with good ventilation and at appropriate height (typically ~1. Practice good wiring: secure.

## What to do if the distribution box cannot be configured
